

C. Prime Swaps

time limit per test: 2 seconds

memory limit per test: 256 megabytes

input: standard input

output: standard output

You have an array $a[1], a[2], \dots, a[n]$, containing distinct integers from 1 to n . Your task is to sort this array in increasing order with the following operation (you may need to apply it multiple times):

- choose two indexes, i and j ($1 \leq i < j \leq n$; $(j - i + 1)$ is a prime number);
- swap the elements on positions i and j ; in other words, you are allowed to apply the following sequence of assignments: $tmp = a[i]$, $a[i] = a[j]$, $a[j] = tmp$ (tmp is a temporary variable).

You do not need to minimize the number of used operations. However, you need to make sure that there are at most $5n$ operations.

Input

The first line contains integer n ($1 \leq n \leq 10^5$). The next line contains n distinct integers $a[1], a[2], \dots, a[n]$ ($1 \leq a[i] \leq n$).

Output

In the first line, print integer k ($0 \leq k \leq 5n$) — the number of used operations. Next, print the operations. Each operation must be printed as " $i\ j$ " ($1 \leq i < j \leq n$; $(j - i + 1)$ is a prime).

If there are multiple answers, you can print any of them.

Examples

input

Copy

```
3
3 2 1
```

output

```
1
1 3
```

input

Copy

```
2
1 2
```

output

```
0
```

input

Copy

```
4
4 2 3 1
```

output

```
3
2 4
1 2
2 4
```

Codeforces Round #246 (Div. 2)

Finished

→ Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ACM-ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
